

Go Solar Workshops

- Save money and protect against rising electricity rates
- Be energy independent and self-sufficient
- Protect the environment
- Protect the future for our kids and grandkids
- Care for God's Creation

Learn How to Solarize Your Home or Business

The Go Solar Workshops are part of the Solarize Hamilton County 2017 Campaign to increase understanding of solar investments, simplify the solar installation process, enable access to program discounts and advance as many solar installations as possible in 2017. You will learn the basics about solar for their home or business, how net metering works and how to select a solar installer. You will also have the opportunity to talk to solar installers offering a group discount for the campaign.

To maximize the economic benefit of their solar investment, homeowners and businesses need to have their solar installations done this year. According to a new State law, solar installations completed in 2017 will qualify for full net metering rates until 2047; installations completed from 2018 to 2022 will only qualify for full net metering rates until 2032; and net metering will no longer be available for installations completed after 2022.

Learn more and RSVP by going to www.carmelgreen.org and clicking on the Solarize Hamilton County link. See you at the workshop!
